

**1** Preparation

Determine if deep cleaning (extraction) or interim cleaning (encapsulation) is required.

**2**

Fill fresh water into solution tank with a coupling hose or by using a bucket. Or fill using a dispensing system.

**3**

Depending on the application method dose the needed product into the fresh water.

**4**

Assemble the brush. Attention: Ensure you use the appropriated brush type.

**5**

Unwind power cord completely and plug it in.

**6** Operation

Lower the brush and suction unit by pressing the front foot pedal down. You will notice the brush and vacuum lower.

**7**

Adjust the brush position according to the carpet pile.

**8** Operation

Adjust the working position that you feel comfortable with.

**9**

Turn on the machine by pressing the On/Off button.

**10**

Choose the application mode you need.  
I. for encapsulation  
II for deep cleaning extraction  
NOTE: Vacuum will only turn on during II mode.

**11**

Depending on the application method pre-spray approved product onto the floor.

**12**

Clean the floor with the machine or by using a hand tool. The triggers on the handle will activate the brush and apply solution based on application mode. NOTE: The machine can be used in a pull or push direction.

**13**

After work process is completed switch off the machine by pressing the On/Off button.

**14**

Lift-up the brush and suction unit by pressing the foot pedal.

**15** Maintenance

Unplug the main cord and wind it up properly.

**16**

Empty the waste water tank by using the hose with the red mark.

**17**

Empty fresh water into a sink through the blue market draining hose or into a bucket by using the additional draining hose.

**18**

Flush out the solution and recovery tank.

**19**

Uncouple the recovery tank cover from the hoses and detach the floating unit.

**20**

Flush out the cover and the floating unit.

**21**

Remove the brush.

**22**

Flush the brush with clear water.

**23**

Periodically check the valve and the fresh water filter.

**24**

Wipe down the machine and allow to dry.

**25**

Store the machine after working and leave the covers open to allow air to circulate.
